

KAN-therm Inox System

ISO 9001 : 2000

KAN-therm Inox is a system of stainless steel pipes and fittings in diameter range of 15-108 mm which are joined by squeezing „press” type joints.

Using stainless steel enables to construct installations transporting corrosively aggressive media and to obtain long-lasting, failure-free operation.

Leak tightness of **KAN-therm** Inox System joints is provided by special O-Ring seals and "M" type three-point clamp system.

Applications:

- hot and cold water supply and central heating systems,
- fire protection systems,
- industrial systems:
 - chemical industry,
 - food industry,
 - hospitals,
- compressed air systems,
- ice water systems,
- heat pumps.

TECHNOLOGY
OF SUCCESS

KAN-therm Inox System

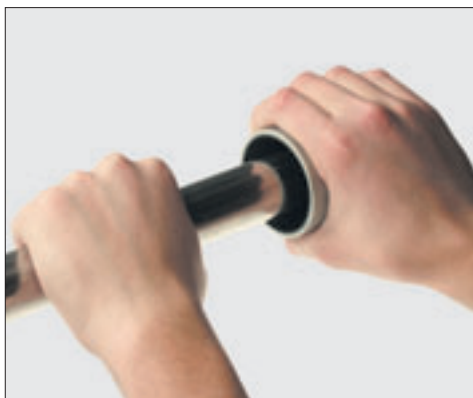

KAN-therm Inox System advantages:

- fast and secure system assembly with no welding or screwing together,
- wide range of pipe and joint diameters up to 108 mm,
- wide range of working temperatures from -20°C to 120°C,
- high pressure resistance up to 16 bar,
- compatible with **KAN-therm** Press and Push material systems,
- pipes and joints are lightweight,
- high aesthetics of installations,
- mechanical damage resistance,
- possibility of installation price optimization by choosing Steel or Inox system depending on installation type and corrosive aggressiveness of water.

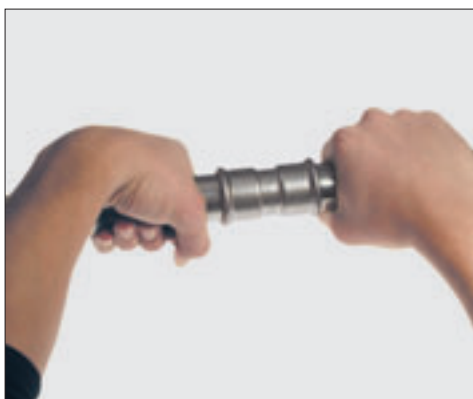

■ Cutting.

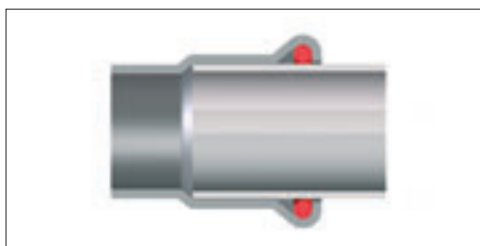

■ Bevelling.

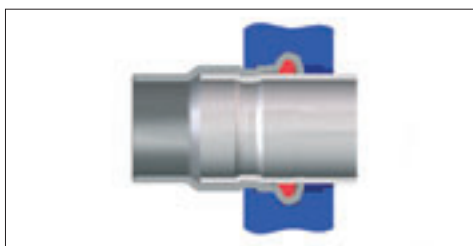

■ Marking insertion depth.

■ Joint ready for pressing.

■ Joint before pressing.

■ Pressed joint.

ISO 9001

KAN-therm Steel System

ISO 9001 : 2000

KAN-therm Steel is a system of steel pipes and fittings of diameters up to 108 mm which are joined by squeezing "press" type joints.

"Press" technology enables to assemble an installation very quickly even when very large material diameters are applied.

Joint leaktightness in **KAN-therm Steel System** is provided by special O-Ring seals and a three-point "M" type clamp system.

Pipes and fittings in **KAN-therm Steel System** contain low content of carbon and are covered by a thin layer of zinc which is a perfect safeguard against corrosion of external surface of pipes and fittings.

Applications:

- closed heating systems,
- ice water systems.

TECHNOLOGY
OF SUCCESS

KAN-therm Steel System

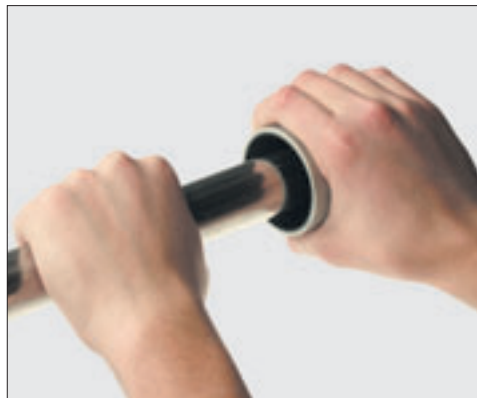

KAN-therm Steel System advantages:

- quick and secure installation assembly with no welding and screwing,
- wide range of pipe and fitting diameters, up to 108 mm,
- wide range of working temperatures from -20°C to 120°C,
- high pressure resistant, up to 16 bar,
- possibility of connecting with **KAN-therm** Press and Push systems,
- lightweight pipes and fittings,
- high aesthetics of installations,
- mechanical damage resistant,
- possibility of price optimization by choosing Steel or Inox system depending on installation type and corrosive aggressiveness of water.
